

NOAA NCEI 1991-2020 Climate Normals Webinar

June 8, 2021

Time: 2:00 - 4:00 P.M. (EDT)

[REGISTER NOW](#)

Registration Deadline: June 2, 2021

NCEI invites you to participate in a webinar focused on the new 1991-2020 U.S. Climate Normals. Climate Normals represent a reference period for monitoring current weather and climate, and describe the expected climate at a location over the seasons. They provide a basis for determining whether today's weather is warmer or colder, wetter or drier than normal. They also can be used to plan for conditions beyond the time span of reliable weather forecasts.

The 1991-2020 U.S. Climate Normals were released on May 4, 2021. Climate Normals are updated every ten years, consistent with guidance from the World Meteorological Organization. This new release of the Climate Normals was designed to meet the needs of the stakeholder community, gathered through numerous engagements, and represent updated procedures and software.

Join us to learn all about the changes in this new decade of Climate Normals on June 8th @ 2 P.M. (EDT). The webinar will:

- Provide an overview of the 1991-2020 U.S. Climate Normals;
- Provide case studies from the agricultural and energy sectors; and
- Provide an opportunity to address user questions.

Expert speakers:

- Michael Palecki, Ph.D., NCEI, Project Manager for 1991-2020 Climate Normals
- Delavane Diaz, Ph.D., Energy Systems & Climate Analysis, Electric Power Research Institute (EPRI)
- Bryce Anderson, Senior Ag. Meteorologist, DTN/The Progressive Farmer
